DETAILED ACTION

This action is responsive to Applicant's amendment filed on 10/9/03.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 1, 2, 7, 9, 10, 11, 13, and 18 are rejected under 35 U.S.C. 103(a) as being unpatentable over Mendez et al as applied to claim1 above, and further in view of Weaver [USPAT 5,524,155].

Mendez et al discloses every aspect of claimed invention except for the plurality of shutters.

Weaver discloses a demultiplexer comprising plurality of shutters.

It would have been obvious to the ordinary skilled person in the art at the time the invention was made to modify Mendez et al's device to include the plurality of shutters for the purpose of blocking certain signal components as shown in Weaver's reference.

Art Unit: 2874

In re claims 2, 11, and 13, Mendez et al disclose the claimed invention except for the relocation of the switches so that the waveguides are crossing each other. It would have been obvious to the ordinary skilled person in the art at the time the invention was made to modify Mendez et al's device to make the waveguides being cross each other, since it has been held that rearranging parts of an invention involves only routine skill in the art. In re Japikse, 86 USPO 70.

In re claim 11, Mendez et al teach at column 4, lines 27-33 that silica substrate is utilized.

In re claims 7 and 18, Mendez et al discloses every aspect of claimed invention except for the N x N waveguide grating router coupled to the multiplexer.

Official Notice is taken that utilizing N x N waveguide grating router for delaying the transmitted light signal in the optical communication system is old and well known in the art. Sec In Re Malcolm 1942 C.D. 589:543 O.G. 440 MPEP 706.02 (a).

It would have been obvious to the ordinary skilled person in the art at the time the invention was made to modify the Mendez et al's device to be coupled to the N x N WGR for the purpose of delaying the signal transmitted.

Claims 4 and 15 are rejected under 35 U.S.C. 103(a) as being unpatentable over Mendez et al as applied to claim1 above, and further in view of Okawa et al [USPAT 6,069,990].

Mendez et al disclose every aspect of claimed invention except for the WGR.

Okawa et al disclose WGR multiplexer and WGR demultiplexer.

Art Unit: 2874

It would have been obvious to the ordinary skilled person in the art at the time the invention was made to include the WGR demultiplexer and the WGR multiplexer for the purpose of broadening the transmission band and reducing the loss [abstract].

Claims 5-6, and 16-17 are rejected under 35 U.S.C. 103(a) as being unpatentable over Mendez et al as applied to claim 1 above, and further in view of Ueda [USPAT 6,163,633].

Mendez et al discloses every aspect of claimed invention except for the Machzehnder switch, which is, activated thermooptically.

Ueda disclose optical waveguide switch comprising a Mach-Zehnder interferometer circuit, which is, activated thermooptically.

It would have been obvious to the ordinary skilled person in the art at the time the invention was made to include the Mach-Zehnder interferometer switch which is activated thermooptically for the purpose of lower power consumption, low extinction ratio, and low crosstalk [abstract].

Response to Arguments

Applicant argues that Weaver discloses not the multiplexer, which uses shutters, but rather a demultiplexer, which uses shutters. Also argues that Weaver's shutters are not used to "block undesired crosstalk signals into the multiplexers", but rather are used to select a desired light signal from a multiplexer.

Examiner does not agree with Applicant's argument because Examiner uses the general teaching of utilizing of shutters in the optical device as shown in Weaver. Weaver clearly

Art Unit: 2874

teaches the utilization of shutters in the optical device, especially in demultiplexer. It is also noted that the newly added limitation, "... to block undesired crosstalk signals into said multiplexers." is considered as an intended use of the device. As long as the shutters in the Weaver's reference are blocking or passing some signals, it is clear that the shutters would inherently block some undesired crosstalk signals of the device.

It has been held that a recitation with respect to the manner in which a claimed apparatus is intended to be employed does not differentiate the claimed apparatus from a prior art apparatus satisfying the claimed structural limitations. Ex parte Masham, 2 USPQ2d 1647 (1987).

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Further references of interest are cited on Form PLO-892, which is attachment to this office action.

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fcc pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event,

Art Unit: 2874

however, will the statutory period for reply expire later than SIX MONTHS from the date of this

Page 6

final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Ellen Kim whose telephone number is (703) 308-4946. The examiner can normally be reached on Monday and Thursday.
